Definitions

Basic Life Support Emergency (BLS Emergency)

When the ambulance provider or supplier is called, it responds immediately. The ambulance must be staffed by an individual who is qualified as an EMT-Basic per state guidelines.

Advanced Life Support (ALS)

An ALS assessment is an assessment performed by an ALS crew as part of an emergency response that was necessary because the patient's reported condition was such that only an ALS crew was qualified to perform the assessment. An ALS intervention must be medically necessary to qualify as an intervention for payment for an ALS level of service.

Advanced Life Support 1 Emergency (ALS 1 Emergency)

When medically necessary, the provision of ALS1 services (ALS assessment or ALS intervention per state guidelines), are performed in the context of an emergency response and responds immediately. ALS personnel are trained to the level of EMT-Intermediate or Paramedic.

Advanced Life Support 2 (ALS 2)

Transportation by ground ambulance vehicle staffed with ALS personnel and the provision of medically necessary supplies and services including:

1. At least three separate administrations of one or more medications by intravenous push/bolus or by continuous infusion (excluding crystalloid fluids),

OR

2. Ground ambulance transport, medically necessary supplies and services, and the provision of at least one of the following ALS 2 procedures:
 - a. Manual defibrillation/cardioversion;
 - b. Endotracheal intubation;
 - c. Central venous line;
 - d. Cardiac pacing;
 - e. Chest decompression;
 - f. Surgical airway; or
 - g. Intraosseous line.

Application: *Crystalloid fluids include fluids such as 5 percent Dextrose in water, Saline and Lactated Ringer's. Medications that are administered by other means (e.g., intramuscular/subcutaneous injection, oral, sublingually, or nebulized) do not qualify to determine whether the ALS2 level rate is payable. The criterion of multiple administrations of the same drug requires a suitable quantity and amount of time between administrations that is in accordance with standard medical practice guidelines.*
